# VHA-DHA Health IT Architecture

VISTA Data Project

vistadataproject.info

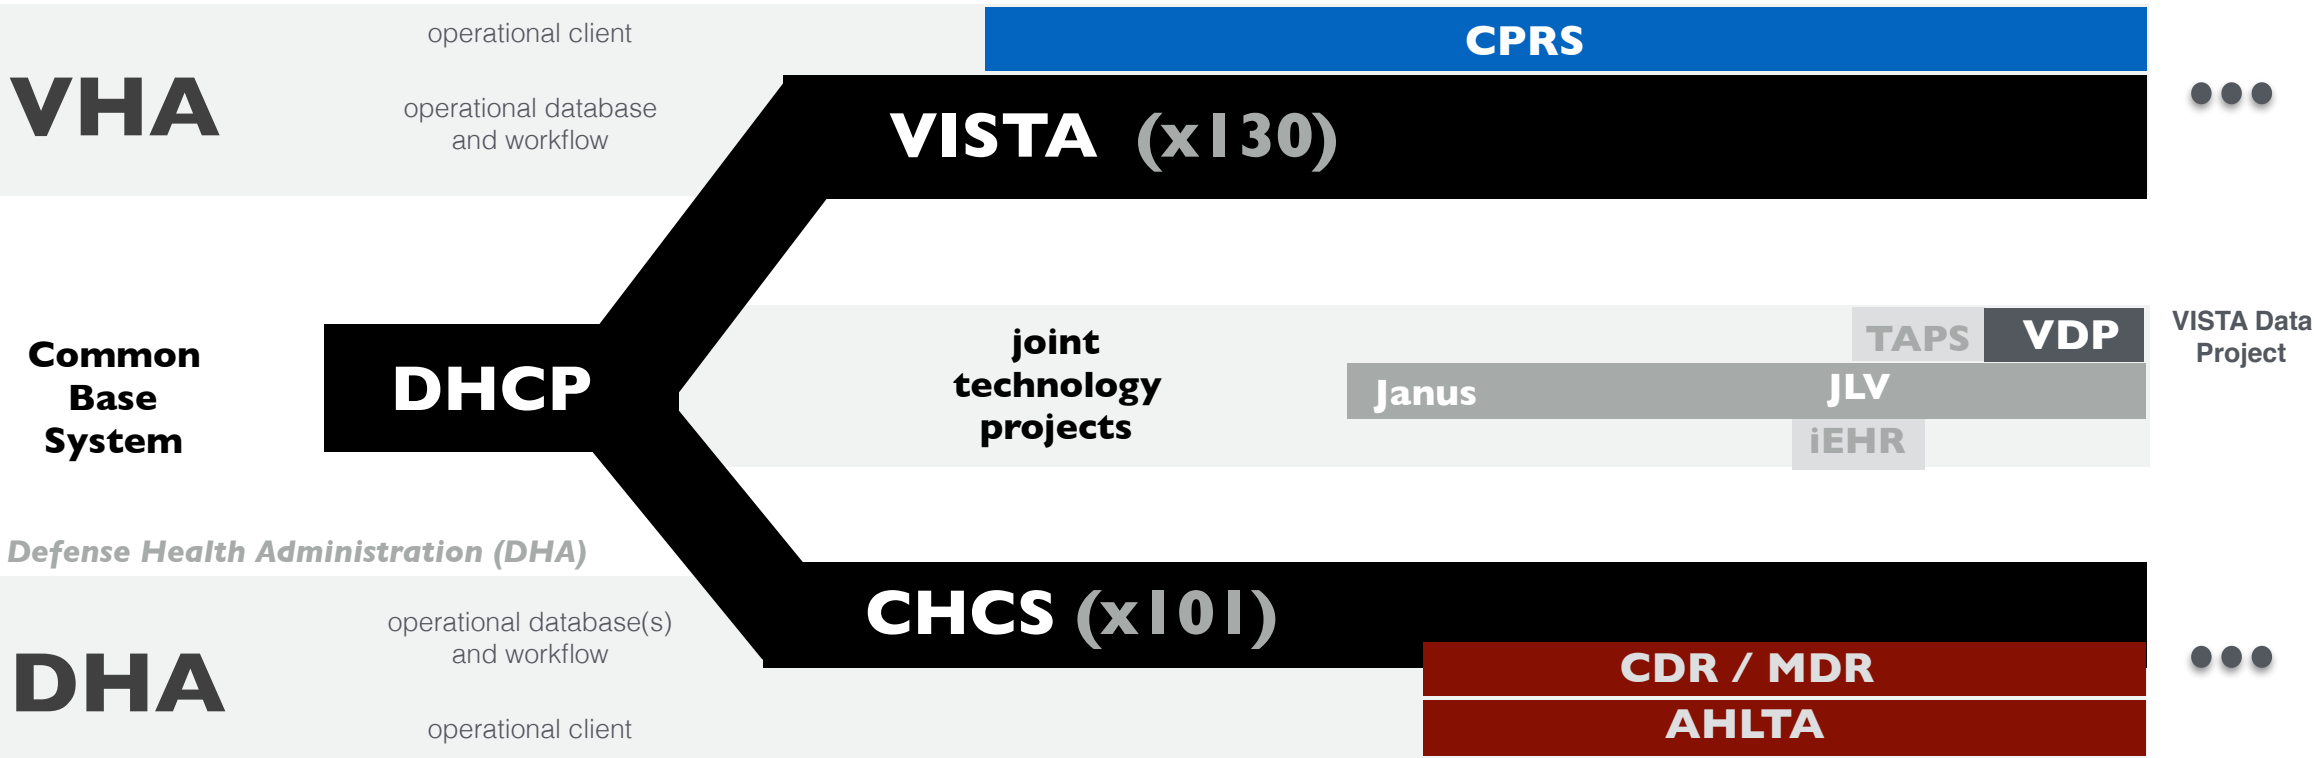

## DHCP is the common base system

VHA: 151 hospitals; 820 clinics; 300 vet centers; + other (total 1700 care sites)  
DHA: 57 hospitals; 350 clinics + other

VHA: 130 VISTA systems operational (since 1981)  
DHA: 101 CHCS systems operational (since 1985)  
Total: 231 DHCP-based systems across VHA-DHA

- DHCP-based systems
- Common technology projects
- VHA-specific interface and workflow
- DHA-specific interface and workflow

### Veterans Health Administration (VHA)

While DHCP was similar in VHA and DHA originally, it has diverged over time. The most significant fork occurred in 2004 when DHA migrated a large portion of operational data and functions from CHCS to CDR and MDR databases. Therefore the variety, volume, and function of CHCS data is now approximately one-third that of VISTA.

	1980	1990	2000	2010	2017
VHA-specific		VISTA	CPRS		
Common	DHCP		JLV	iEHR	TAPS VDP
DHA-specific		CHCS	AHLTA / CDR		Genesis

Note: Time scale simplified for clarity

- 1981 - DHCP - Decentralized Hospital Care Program - VA Fileman database and applications [VHA]

1985 - CHCS - (DHCP renamed to) Composite Health Care System; modified for DHA use [Leidos (SAIC)]

1994 - VISTA - (DHCP renamed to) Veterans Information Systems Technology Architecture [VHA]

1997 - CPRS - Computerized Patient Record System - graphical interface and workflow [VHA]

2004 - AHLTA/ CDR/ MDR - Armed Forces Health Longitudinal Technology Application [Northrup Grumman]
- 2003 - Janus (renamed to JLV in 2011) [DHA-VHA]

2011 - iEHR - Integrated Electronic Health Record [ SMS ]

2013 - TAPS - Transition Application Plan Support [DHA-VHA]

2016 - MHS Genesis (COTS EHR - Cerner)

2016 - VDP - VISTA Data Project

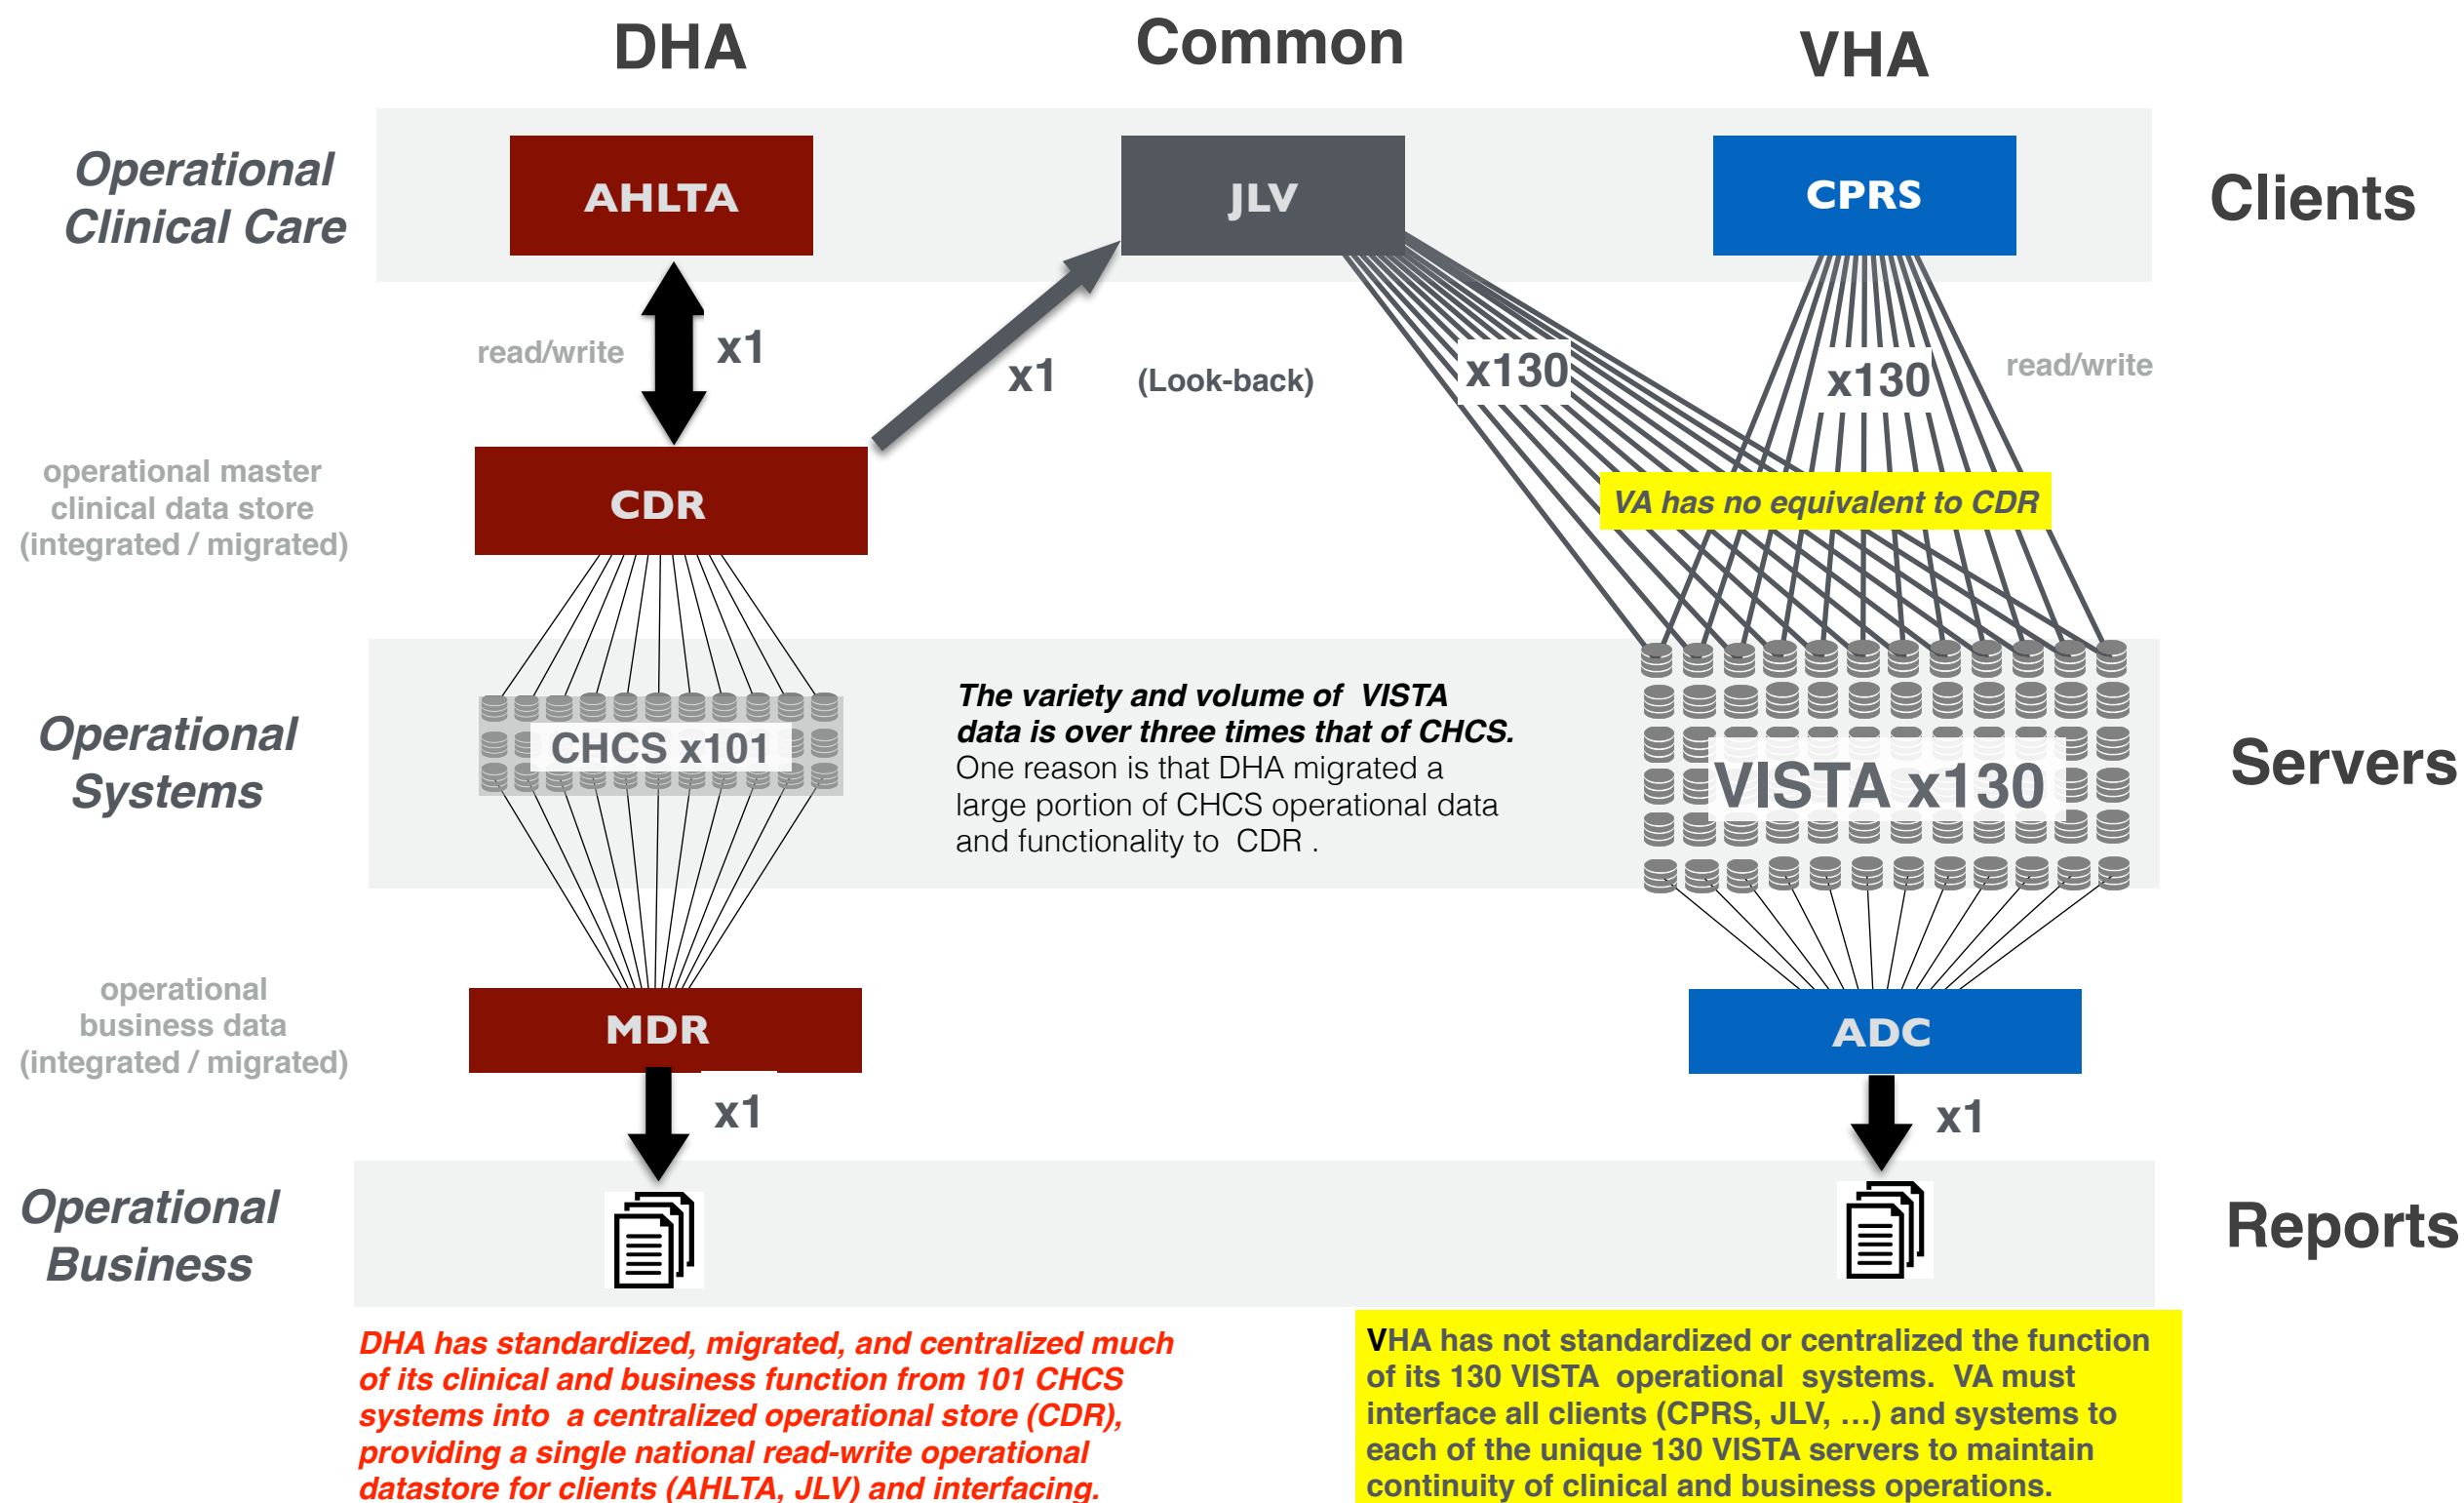

# VHA-DHA Health IT Architecture

VISTA Data Project

vistadataproject.info

## VHA is larger and more complex

AHLTA - User Interface  
CHCS - Composite Healthcare System (All operational data)  
MDR - Military Data Repository (Operational business data)  
CDR - Clinical Data Repository (Operational clinical data)

CPRS - User Interface  
VISTA - VA Information Systems Architecture (All operational data)  
ADC - Austin Data Center (Operational business data)

# VISTA is not only an EHR

VISTA Data Project

vistadataproject.info

## Most of VISTA is VA-specific Business function and data

## Migration from Servers to Services

### Cloud Services

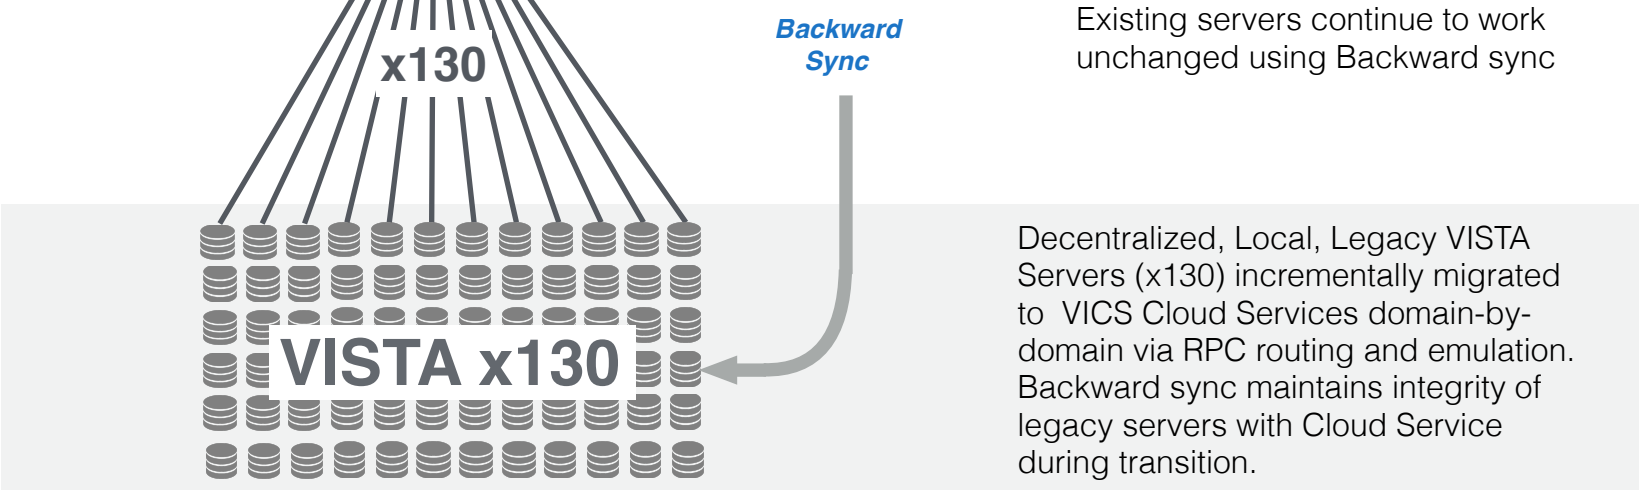

**Veteran Integrated Care Services (VICS) enables all 130 VISTA systems to be completely decommissioned with no loss of Veteran- or VA-specific care or services.**

### Clients

### Legacy Servers

# VISTA Data project

## VICS Compliments and Accelerates EHRM Success

### VICS Compliments EHRM

Veteran Integrated Care Services (VICS) enables migration from 130 VISTA servers to a commercial clinical and business systems (COTS EHR / ERP) while maintaining seamless continuity of veteran-specific care and services.

### VICS Accelerates EHRM

The VICS Approach allows the decommissioning all 130 VISTA systems *independent of (and more rapidly than) the rate of COTS systems implementation* - allowing resources to focus on COTS EHR implementation.

# VISTA Data project

VISTA Data Project

[vistadataproject.info](http://vistadataproject.info)

## Conclusion

---

- **Complete Decommissioning** of all 130 VISTA systems (no residual technology or servers to maintain).
- **Proven** DoD-developed approach (common goals)
- **Pure Commercial Cloud** solution (no GOTS)
- **Preserves Continuity** of Veteran- and VA-specific Integrated Care and Services (VICS)
- **Saves** government maintenance and modernization costs of VISTA systems (\$19B over 10 years)

**VISTA Data Project** The Master Data Model for Veteran Care Demo 1 Demo 2 DevDocs

The Veterans Information Systems Technology Architecture (VISTA) is the U.S. Department of Veterans Affairs integrated longitudinal clinical, business, and administrative information system. 130 instances support the operations of over 1700 VA hospitals and clinics nationwide.

VISTA's data model - the roadmap to all of VA's institutional, business, and clinical processes and data - has evolved organically over the past 35 years but has not been surfaced and leveraged in computable form. Until now.

In the VISTA Data Project (VDP), this organic data model is comprehensively represented and incrementally normalized across all VISTA systems to produce a national, standardized Master VISTA Data Model (MVDM). An operationalized MVDM provides new clients with a single, secure, symmetric read-write interface to every VISTA and, through *emulation* of existing interfaces, VISTA's current clients such as CPRS and JLV work unchanged, but with greatly enhanced security.

Through this same MVDM-driven mechanism, VISTA functionality is incrementally migrated to a single national, cloud-based, veteran-specific Veteran Integrated Care Service (VICS), allowing the corresponding functionality of the decentralized VISTA systems to be decommissioned while maintaining seamless continuity of veteran-specific care and services.

The diagram illustrates the VISTA architecture and migration process. It is organized into three main layers: Services, Clients, and Servers.

- Services:** U.S. Federal Certified (HIPAA Secure) Commercial Cloud and NoSQL Datastore with Centralized, Model-driven Veteran Integrated Care Services (VICS).
- Clients:** Existing clients continue to work unchanged using RPC routing and emulation (CPRS, JLV). New clients and services interface via REST/HTTP (New Web / Mobile).
- Servers:** Decentralized, Local, Legacy VISTA Servers (x130) incrementally migrated to VICS Cloud Services domain-by-domain via RPC routing and emulation. Backward sync maintains integrity of legacy servers with Cloud Service during transition. Existing servers continue to work unchanged using Backward sync.

Key components and connections include:

- RPC Router:** A central component that routes requests between clients and servers.
- Backward Sync:** A process that maintains the integrity of legacy servers during the migration to the cloud.
- HTTP / REST web sockets:** A new interface for clients to connect to the VICS cloud service.
